

Channels for airport staff

Entrances and exits for authorized staff are located along the division between the public and security areas. These doors are not generally subjected to constant staff surveillance and therefore require security units for access control.

Recommended solutions

Evolves half-height sensor barriers. This equipment is used mainly in areas which are within the sight of reception staff such as an airport's office area. The unit is a sensor controlled passage way with automatic half height doors.

- Easy passage, even with bags or luggage, no contact with door wings.
- High through put rate and maximum safety for user.
- Variety of colors, shapes and finishes.
- High level of user acceptance.
