

# Case Study

## 2018 - Ping An Bank

In 2018, Evolve supplied and installed over 34 PG300 pedestrian paddle gate cabinets with face recognition at two Ping An sites, The Ping An Science and technology building and Ping An Royal Court.

Commercial - Case Study

# Background

Ping An Bank is one of China’s top ten national commercial banks boasting 38,600 employees, 58 branches and 1,037 outlets, and provides a full range of banking services to retail, enterprise and investment customers throughout China.

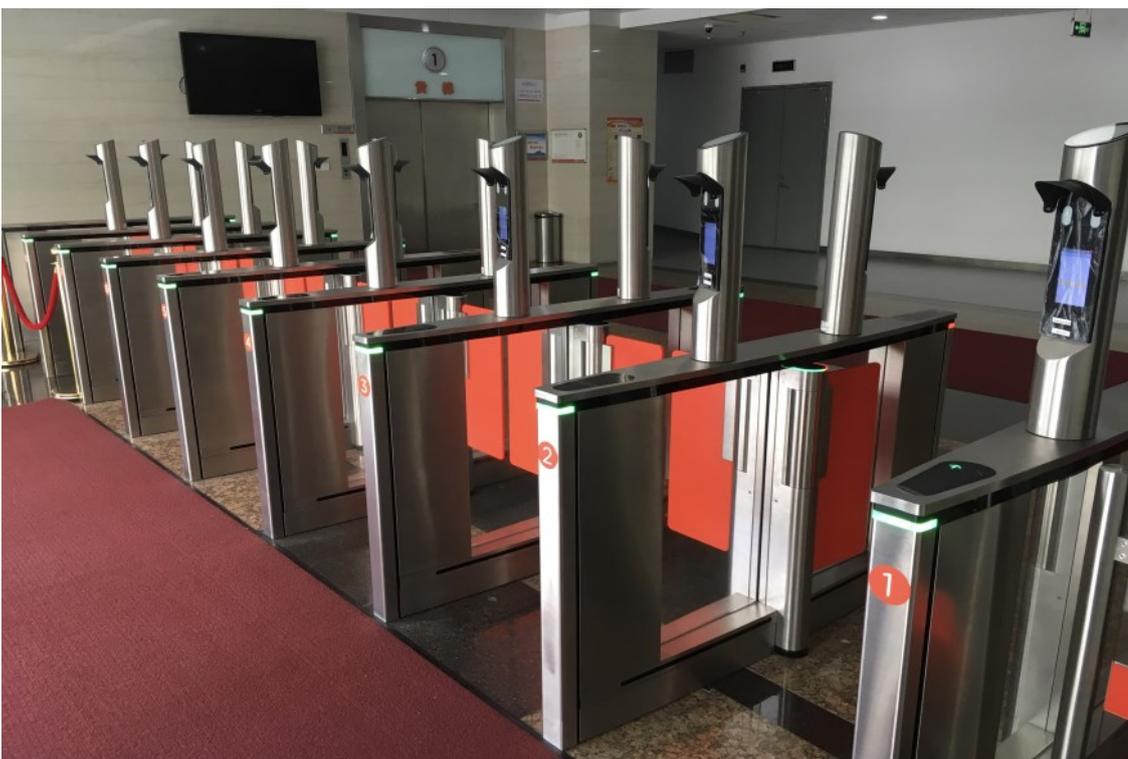

Ping An Bank’s diverse and growing client base created challenges within its existing compliance and risk management systems.

An internal security review highlighted the need to replaced outdated security gates at one site and introduce new security and safety measures for its staff at a second site.

# The Solution

The solution was split into two phases.

Phase one was to install two groups of 7 lane, 16 cabinets of Evolve PG300 with card and face recognition detection to one of its call centres with over 3,000 members of staff.

# Commercial - Case Study

Following a successful trial on phase one, phase two was ordered in February 2019.

The phase was spread across 3 floors with 6 groups of 2 lanes, 18 cabinets.

Due to width restriction and marble floors the ES160 lanes were used and surface mounted on a floor plinth. All the lanes were fitted with face recognition tablets to control both the entry and exit directions.

Where lanes couldn't be used, the office doors were fitted with wall mounted face recognition tablets.

# Client Feedback

*"We are very impressed with the look of the gates and the speed at which they work and also the facial recognition.*

*The gates combined with the face recognition have greatly improved the security of the builds and safety of our staff".*
